

WILDLIFE NEEDS YOUR HELP!

CHOOSE NON-POISONOUS SOLUTIONS

The [Wallis Annenberg Wildlife Crossing](#) connects the Santa Monica Mountains, giving wildlife a safe passage. But **rodent poisons** endanger them.

THE POISONS PUT PREDATORS,
SCAVENGERS, AND THE ENTIRE
ECOSYSTEM AT RISK

THESE BAIT BOXES CONTAIN
THE POISONS WITH SEVERE
IMPACT ON WILDLIFE

RODENTS DO NOT DIE IN THE BOXES

THEY EXIT AND ARE EASILY CAUGHT BY PREDATORS

THE POISONS ARE PASSED UP THE FOOD CHAIN

Harming and killing our wildlife, pets, and even children.

THE FACTS ARE ALARMING:

- **10 of 16 mountain lions** tested in the Santa Monica Mountains had bromethalin exposure (National Park Service, 2020–2022).
- Even **small amounts of cholecalciferol** can be deadly.
- Veterinarians report **increasing cases of pet poisonings**.

There is **NO**
SAFE POISON

MOST COMMONLY USED RAT POISONS:

Bromethalin

Cholecalciferol (Vitamin D₃)

Strychnine

Zinc Phosphide

**THERE ARE NO ANTIDOTES
FOR THESE POISONS!**

Bromethalin, cholecalciferol, and the others are highly toxic poisons to wildlife and pets. The poisons' effects are rapid, irreversible, and deadly.

WE CAN DO BETTER. HERE'S HOW:

Seal entry
points and
remove
harborage

Eliminate
food and
water
sources

Use live
traps
indoors
only
